

The Smart, Practical Choice For Your Electronic Health Record/Practice Management System

Medisoft® Clinical from McKesson is a seamlessly combined Electronic Health Record/Practice Management system. It's proven. Thousands of physician practices like yours are improving productivity, profitability and patient care with the EHR in Medisoft Clinical. Make the smart choice and reach a new level of practice automation with Medisoft Clinical.

An Empowering Combination

Medisoft Clinical brings together the latest practice management system, Medisoft Version 17 (v17), with an advanced, award-winning EHR at a value that independent physician practices can appreciate.

Bright Ideas for Your Smart Practice

Medisoft Clinical features [Bright Note Technology™](#), a state-of-the-art processing engine that enables physicians to complete an entire chart from a single note. Once the record is complete, one touch instantly sends the searchable data throughout the patient chart.

Using dot codes to complete the single screen note, Bright Note Technology synchronizes discrete and reportable information to the appropriate folders within the electronic chart. As a result, physicians and medical staff have quick, easy access to the information they need for accurate clinical care reporting, timely reimbursements and performance tracking.

Medisoft Clinical gives you and your staff a new level of operational efficiency and confidence. That's because our EHR solution has the intuitive look and feel of a paper chart you and your staff can easily navigate. You will be more focused on your patients, not the technology behind your practice.

"The days of labs and paper charts piling up around here are over. Our electronic claims are accurate before they're submitted and our patient data is at my fingertips. Medisoft Clinical is allowing me to provide better and safer patient care."

*– Judy L. Jones,
Family Nurse Practitioner,
Waynesboro, Tenn.*

One Choice for Your One Touch EHR Solution

Bright Note Technology

Once physicians complete a single progress note, Medisoft Clinical with Bright Note Technology takes it from there.

Using your preferred data entry technique, Medisoft Clinical enables physicians and physician practices to populate complete charts and manipulate patient data automatically and efficiently. Once the doctor saves the exam note, searchable information is by design delivered to relevant areas and tabs of the record.

The innovative solution allows doctors to spend less time on charts and more time with patients. Choose templates, speech recognition, transcription, digital pen, dictation or Web-based patient data entry to operate the chart automation with methods you know and trust.

Provider Dashboard

Physicians can use the provider dashboard to view critical patient information. Messages, incoming results and a daily patient schedule provide a single, simplified location for doctors and medical professionals to quickly and effectively review patient care and status.

Reporting

Medisoft Clinical automatically generates searchable patient data to help you produce efficient and effective clinical care reporting. The new reporting capabilities enable your practice to easily enlist the EHR to help you qualify for incentives that encourage the use of EHRs.

Medisoft Connect

Medisoft Connect, powered by RelayHealth®, completes your practice solution with healthcare connectivity services that strengthen the relationship between your practice, patients, payors, hospitals, health information exchanges and pharmacies. You might call it your direct line to your healthcare community.

Medisoft Model of Success

"We chose Medisoft Clinical because the electronic health record easily integrates with the Medisoft practice management system that we already use. Medisoft Clinical has eliminated our inefficient paper processes and made us a much more productive practice."

*— Judy L. Jones,
Family Nurse Practitioner*

Jones runs her own small family practice in Waynesboro, Tenn. Her team of five depends on the user-friendly, electronic access to patient information in every phase of the operation. And she credits her McKesson Value Added Reseller for providing local support and leading a successful implementation.
